

## CHAPTER 5: CONCLUSION

### 5.1 Future Scope of the Project:

- ❖ Addition of a graphical user interface (GUI).
- ❖ Online access for students, parents and teachers.
- ❖ Integration with a database for better data management.
- ❖ Addition of online fee payment and report generation.
- ❖ Development of a mobile or web-based version.
- ❖ More features can be added according to future requirements.

### 5.2 Limitations:

- The current system is console-based.
- Data is stored using local files.
- The system does not provide online or remote access.
- Requires manual entry of student and staff information.
- Limited security compared to a database-based system.

### 5.3 Security:

- Provides separate login access for different users.
- Users can access functions according to their roles.
- Important operations are restricted to authorized users.
- Records are stored locally through file handling.
- Helps prevent unauthorized modification of school records.

### 5.4 Conclusion:

- ❖ The **School Management System** successfully demonstrates the use of C++ for managing different school activities. It helps organize records of schools, principals, teachers, students, attendance and results while reducing manual work.

The project provides a simple, organized and efficient system using **C++ programming and file handling**.

## CHAPTER 6: BIBLIOGRAPHY

### 6.1 Books:

- **Sumita Arora**, *Computer Science with C++*.
- **E. Balagurusamy**, *Object-Oriented Programming with C++*.
- **Bjarne Stroustrup**, *The C++ Programming Language*.
